

CHECKLIST: DOES YOUR BUSINESS NEED A MORE RUGGED TIME CLOCK?

Workers in labor-driven industries are seldom stationary, which means they need timekeeping hardware that can go everywhere they do and withstand any environment where work is to be done.

Is your organization in need of an upgrade to a more durable and mobile time clock? Use these questions to guide you as you consider a potential upgrade.

Do you employ workers in labor-driven industries?

Labor-driven industries are generally fields where workers spend a significant portion of their workday on their feet, behind a wheel, or working with their hands. That includes employers in areas such as manufacturing, construction, agriculture, trucking, and logistics.

Are your worksites outdoors or exposed to the elements?

Construction sites, manufacturing facilities, agricultural fields, and other blue-collar workspaces need drop-proof, weather-resistant, and all-around rugged time and attendance hardware durable enough to withstand their environments.

Do you need your workforce to transfer job codes while onsite?

Being able to transfer job codes without having to manually record data or find a physical time clock saves valuable time, increases accuracy, and ensures data is tracked to the correct job.

Are you concerned about employee time fraud?

Fraudulent time and attendance practices like buddy-punching and overreported hours can be harder to catch in a mobile work environment. A time clock with facial recognition capability allows employers to be sure that the person performing the work is who they claim to be, while also keeping compliant with all relevant privacy laws.

Do your workers report to different worksites depending on the day?

For businesses operating across multiple locations, a mobile time clock solution provides consistency and easy access.

CHECKLIST: DOES YOUR BUSINESS NEED A MORE RUGGED TIME CLOCK?

Does your workforce operate in areas with limited cellular or internet service?

For jobs that take workers to remote locations or areas with limited online connectivity, a device that can record and store data securely until it can be transferred to the cloud is a huge benefit.

Do your employees' jobs require extensive driving?

Workers in industries like transportation, agriculture, and healthcare are frequently on the road, making stationary time clocks impractical for tracking their hours.

Do you have trouble managing breaks or overtime?

Keeping compliant with federal, state, and local requirements surrounding breaks, meals, and overtime for workers in the field can be a challenge without real-time time tracking capabilities.

Do you need to eliminate unnecessary movement(s) that may cause your crews potential injury?

Workplace injuries lead to costly downtime and production delays that labor-driven employers can't afford. Mobile time and attendance tools help to eliminate extra movement and the risk of injury.

Are you aiming to boost overall productivity?

Keeping track of time and attendance, correcting errors, and adjusting schedules can eat up a lot of time for employees and administrators alike. Automating and mobilizing those functions saves time and money across the board.

Is your business in need of a rugged time clock that can withstand any environment and go everywhere your employees do? Learn more about the many ways the new **Flex Clock** from Ascentis can help you maintain a more productive, compliant and profitable workplace.
